

**Our Optimum Voyage Routing (OVR) service is designed to help you conduct your vessel operations safely and efficiently.**

With the high cost of operating a ship, even a small increase in voyage sailing time will adversely effect profits. Further, more time at sea and sailing the less favorable increases your exposure to environmental and other risks.

However, good planning and a continued awareness of en route developments can better prepare you for handling difficult operational situations.

We can help you meet your schedules and reduce the chances of weather damage by directly assisting your ship Masters in their selection of the most favorable and economical routes through considering the weather, currents, cargo, and time constraints.

*"Many thanks for providing a very safe and pleasant voyage. Weather forecasting was excellent."*

*- Master of Tharinee Naree -*
